

You built the agent. Now get expert user feedback.

A verified human specialist tests your agent on the tasks its users need to complete.

Set the payment with your ask.

Describe the agent, tasks and review scope. Set the payment yourself, then check the specialist's profile and credentials before they start.

Set by you

Payment stated in each ask

01

Choose the specialist.

Review their credentials. Agree the agent version, intended users and test scenarios.

02

The specialist tests it.

The specialist records the interactions and explains where the agent helps or fails.

03

Use the findings.

Receive ranked recommendations. Agree any follow-up review in your ask.

What you receive

A private report links each finding to an observed interaction. You also receive a review summary and approve what you share with your team or client.

Agree the tasks, access and delivery date with the specialist before work starts. Include the scope and timing of any follow-up in your ask. Inspect the specialist's identity, relevant experience and required credentials before booking. Broader user research, security audits and compliance assessments need a separate quote.

Start with your agent.

Paste into your coding agent: Set up IXO by following <https://reviews.ixoworld.com/mcp.md>. Then draft a review ask with the scope and payment you choose.
